

# ***Get Quoted!***

***In the "Fedora Linux Trouble Shooting Bible"!***

We need a few good quotes from the experienced technical Rackers for the "Top 10 Problem/Solutions" section of each chapter in the soon to be printed book, "Fedora Linux Troubleshooting Bible", by Chris Negus and Tweeks.

Since Rackspace is a Linux leader in the hosting industry, we would like to get *our name* and *our people* spotlighted in the book as experts who can "do the needful"!

Tweeks is writing the following chapters and wants your "most common problems/solutions":  
(rough ideas in parenthesis)

- Chapter 4: Locking Down Desktop and Server Systems  
(gnome & kde, services, IPtables, baselining)
- Chapter 5: Preparing for Backups and Migration  
(tape , xfer, disk2disk, DVD/CDs.. migration tips)
- Chapter 10: Detecting and Responding to Intrusions  
(file-mon, iptables, RPM/tripw, snort, sgi\_fam, etc)
- Chapter 11: Firewall Troubleshooting  
(common ports, requests, multiport services)
- Chapter 12: DNS Troubleshooting  
(pri & sec issues, zone xfers, file formatting, 8vs9)
- Chapter 17: Web Server Troubleshooting  
(DNS, 1.3 vs 2 issues, IP issues, SSL/.Certs, etc)
- Chapter 18: File Transfer Troubleshooting  
(fp, sftp/ftps, scp, webmin, PHP, others?)
- Chapter 19: E-mail Server Troubleshooting  
(MX/DNS, lookups, dirty lps, AOL/TTL, virtuser-loops)

We're making "The Top 10 Problems & Solutions" for each of the chapters above and would like YOUR quotes to include in each chapter.

The book is going to print soon, so email your common Problem/Solutions to tweeks very soon. Two chapters have already been sent to the editors.. so don't wait! **Get Quoted!**

**"Thank you very much! Please Do the Needful!"**

**Tweeks**
